## 10.2015

Online-News for Plastics and Pharma Technologies

inForm.Intro

Dear Readers,

We are happy about a very successful Fakuma 2015 with a record number of visitors at our booth. We had many interesting conversations with customers, interested persons and partners. A pleasure for us was the visit of our trainees of the 2nd year of apprenticeship exploring and researching the fair with numerous tasks of their trainers.

Currently a team of our apprentices is taking care of our booth at the Science Days at Europa-Park in Rust, Germany – a special 3 days event for orientation of pupils. Interdepartmental events play an important role in our concept as they are organized and performed by our apprentices by themselves.

We know: Trainees and students secure our future. Therefore it is our mission to promote each talent individually. Under the motto "Braunform - we for your future" we want to sustainably improve the quality of our training. Our existing project team of trainers and the HR department is constantly working on adapting our concept to the changing conditions of working life.

Our concept: a mixture of high-tech apprenticeship, supervision by educators and training officers and joint activities. We are successful with our concept - our apprentices regularly count among the best. And this makes us proud.

Warm regards  
Pamela Braun

## New generation at Braunform GmbH

Family Erich Braun announced that the company succession of Braunform GmbH is successfully finished by reorganizing the Management Board. On September 18, 2015 Mr. Klaus Bühler and Mr. Emmanuel Foyer were appointed General Managers of Braunform GmbH.

## Braunform established four patented innovations in the field of index molds and expands its services

Due to the objective to offer the end user superior products, the demand for functional molds of the highest quality is increasing. The product function is not only decisive for the design and haptic but also for the related mold concept. An optimal implementation of these requirements may, for example, be achieved by the use of the multi-component technology.
