

Issue 02.2021

### **Intro.**

Dear readers,  
Each season has its own particular beauty. After a beautiful winter with snowy landscapes, the colorful spring is approaching with big steps. In this way we are also setting course for our newly set objectives.

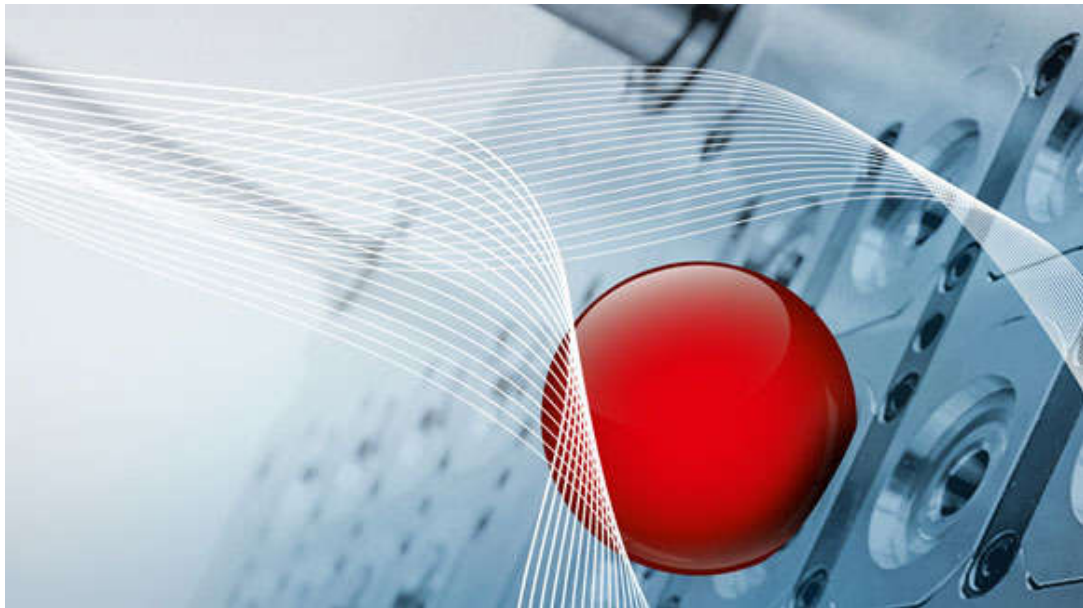

In the area of services, we have been intensifying our focus on becoming a service partner for several years now. "Large inspection" instead of "new investment" is the keyword here. In the area of energy, work has started on our photovoltaic system at the Eendingen plant. This system has the potential to generate the electricity of around 165 average 4-person households.

With these two projects, we are focusing on achieving one of our goals of further improving our rating of the silver medal we have won at the EcoVadis sustainability platform in December 2020.

In this sense, I wish you – also in the name of my entire team – a beautiful beginning of spring.

Best regards  
Pamela Braun

**Acting as a system partner – service for long-term solutions.**

## "The large inspection"

Do you feel the same way? Especially now – in turbulent and economically challenging times – a complete replacement investment is not necessarily desirable or enforceable. Our experience shows that preventive maintenance can significantly extend the life cycle of injection molds. To a large extent, it saves you the risk of operational disruptions in the production process. Thanks to our data base and many years of expertise, we can advise you in detail when the ideal and effective time for maintenance has come. Our job doesn't end with the release of the mold, because we focus on the whole, including customer service and tool management. And not just over the guaranteed term of a tool, but also with the option of an extended running time.

Already since 2012, we have implemented our maintenance and modification department, which offers you the highest flexibility through short reaction and processing times. The currently 15 employees including 14 own processing machines, tendency increasing, take over the regular "large inspection". Individual processing is carried out autonomously by our service department, which has existed since 2020.

### **Braunform Rotary Table.**

## **Quality since 1990**

Rotary table technology opens up all possibilities for working even more imaginatively, quickly and efficiently with multi-component molds. The long-lasting CE-certified quality of the rotary table with an accompanying low maintenance requirement enable long running times and reduce downtimes and expensive maintenance intervals.

Our strength lies in individuality in order to offer you the highest level of customer satisfaction. While the "Braunform classic line" as a classic without special options offers the best price-performance ratio, the "Braunform vision line" leaves nothing to be desired. Take a look at our brochure here.

## Photovoltaic system at the site Endingen.

### Contribution to energy revolution and climate protection

As already reported in the last newsletter issue, an investment for a photovoltaic system for the site in Endingen was approved in December 2020. The starting signal for the project was given at the beginning of February 2021 with the aim of being able to put the plant into operation in around 12 weeks. The company expects full payback of the plant in 5 to 6 years. With the potential to generate electricity for around 165 average 4-person households, Braunform is not only supporting the energy revolution and climate protection, but also ensuring sustainable power generation directly within the company. This is because the renewably generated electricity is largely used for the company's own consumption. With this step, Braunform contributes to an improvement of its CO2 balance and consequently also to the preservation of an intact environment for present and future generations.

## Breaking new ground.

### Vocational orientation offer in online format

The topic of training continues to be an important pillar for counteracting the shortage of skilled workers. Since important sources of information such as training fairs and career orientation days, as well as internal events are not currently taking place, those responsible have now strike a new path – a virtual career presentation of technical apprenticeships at Braunform GmbH.

## Trade fairs and events.

### Fakuma 2021

12.10.2021 - 16.10.2021  
Exhibition Center Friedrichshafen,  
Germany

### Pharmapack 2021

13.10.2021 - 14.10.2021  
Paris Expo, Porte de Versailles, France

### CPhI 2021

09.11.2021 - 11.11.2021  
Milan, Italy

The multi-component (2-shot) technology is one of the key factors of Braunform's success.

The concept of Braunform MED Mold® stands for the safe use of injection molds in the clean room.

Multi-cavity molds are particularly economical in mass production of high quality components.
